Embedding the strongroom door in concrete

- The undersigned confirms and warrants that the strongroom door has been embedded with concrete of the same type of concrete as the rest of the strong room (TRVE 10-3 pt. 7)
- The strongroom door was not embedded with the same type of concrete as the rest of the strong room, but:  
The security door was concreted as follows:

Closure of the temporary transport opening, if available

- The undersigned confirms and warrants that the transport opening has been closed with reinforcement grids according to TRVE 10-3 pt. 5 and concrete of the same type of concrete as the rest of the strong room (TRVE 10-3 pt. 8)
- The transport opening was not closed like the rest of the strong room:  
The transport opening was closed as follows:

Strong room

- The undersigned confirms and warrants that the reinforcements, wall thickness and concrete quality of all barrier walls, floor and ceiling meet at least the requirements of TRVE 10-3 pt. 5.
- The undersigned confirms and warrants that system-related openings (ventilations, cable ducts) comply with the requirements of TRVE 10-3 pt. 9.
- Existing components for wall thickness reduction according to TRVE 10-3 pt. 6 were taken into account.
- Weakening of the value protection walls (EMA installations, expansion joints, water barriers) were carried out according to TRVE 10-3 pt. 10.
- The constructed value protection room has the following deviations from the requirements of TRVE 10-3:

The installation of the door is not the subject of this declaration!
